

## Eng. Giuseppe Giannino

Electronic and Telecommunication Engineer,  
the Innovation and Development Centre,  
Isotta Fraschini Motori Company, Italy

Giuseppe Giannino is an electronic and telecommunication engineer, graduated in 2018 at Polytechnic of Bari. During his studies he spent lots of time on research projects abroad (between Ireland - Cork Institute of Technologies, where he worked on optical devices for Telco application and Russian Federation - Kazan National Research Technical University, working on antenna design, optical components and data processing).

He worked as an Automation Test Equipment designer and developer and system integrator at MERMEC S.p.A. for the IoT Business Unit. Here he was mainly involved on connection systems for micro-mobility vehicles. Since July 2021, Giuseppe has been working at the Innovation and Development Centre of Isotta Fraschini Motori (a Fincantieri company) as Technical Leader within the automation, control and supervision system team for marine and terrestrial power sources. His main technical skills are: IoT systems, communication protocol, embedded software developments, electromagnetic compatibility, and data processing.
