Cloud Business Intelligence A Solution For Smart Ports & Logistics

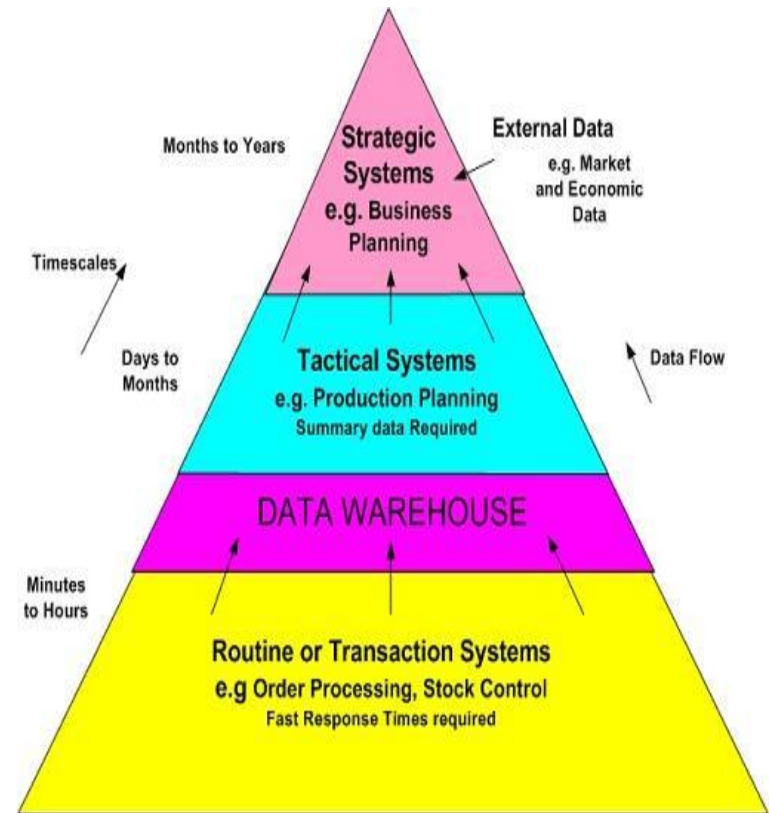

*Dr. Amal Moustafa Mohamed
Head of IT Department CMTT
amal.cmtt@gmail.com*

AGENDA

- Introduction
- Business Intelligence (BI)
 - Data Warehousing مستودعات البيانات
 - OLAP المعالجة التحليلية للبيانات
 - Data Mining التنقيب في البيانات
- Cloud Business Intelligence (CBI)
- Smart Port الموانئ الإلكترونية
- Logistic Services الخدمات اللوجستية
- Impact of Cloud Business Intelligence
- Conclusion

What is BI منظومات الأعمال الذكية

Business Intelligence
(BI) a category of applications and technology for gathering , storing, analyzing and provide access to data to help users make better business decision.

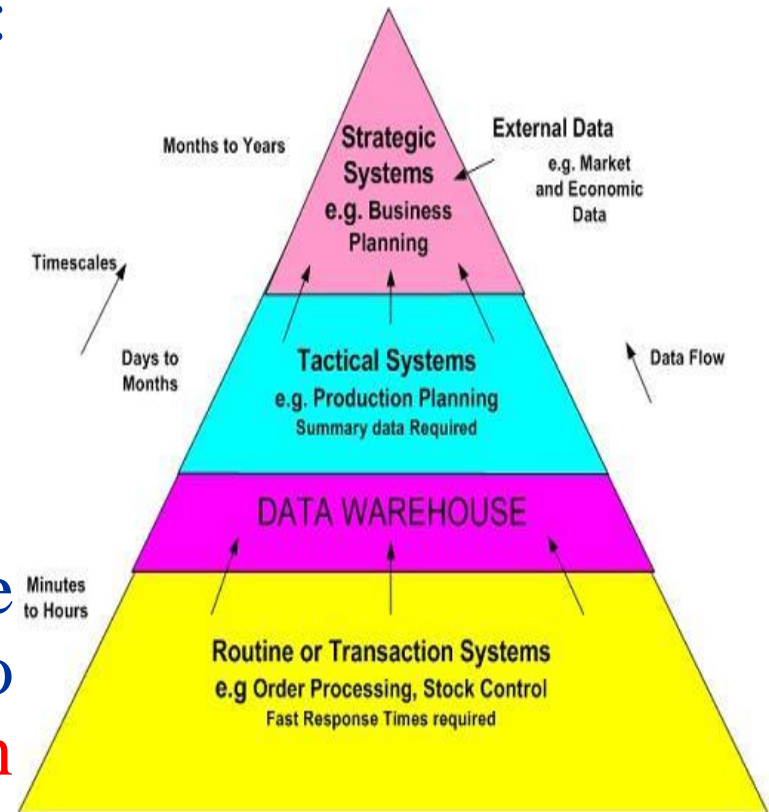

What is BI منظومات الأعمال الذكية

➤ Business intelligence **consists of:**

- Sourcing the data.
- Assessing the situation.
- Filtering out unimportant information.
- Developing solutions.

➤ Business intelligence is the ability of an organisation to **understand** and **use information** to its gainful operation.

Why Business Intelligence (BI)

- Business process created **mountains** of data stored inside complex **IT systems**.
- Efficient analysis of these data is crucial for a **success** of any organization
- **BI** technology can collect and transform millions of records for **comprehensive** analysis every which way.
- **BI** support **decision-making** capabilities to attain and maintain a competitive advantage in today's turbulent market

BI Technology

**Data Warehousing
(DW)**

**On-Line Analytical
Processing (OLAP)**

Data Mining (DM)

Data Warehouse مستودعات البيانات

➤ Data warehousing is a database designed for **query** and **analysis** rather than for transaction processing.

➤ Contains historical data derived from transaction data.

➤ Include data from **several** sources.

Data Warehouse مستودعات البيانات

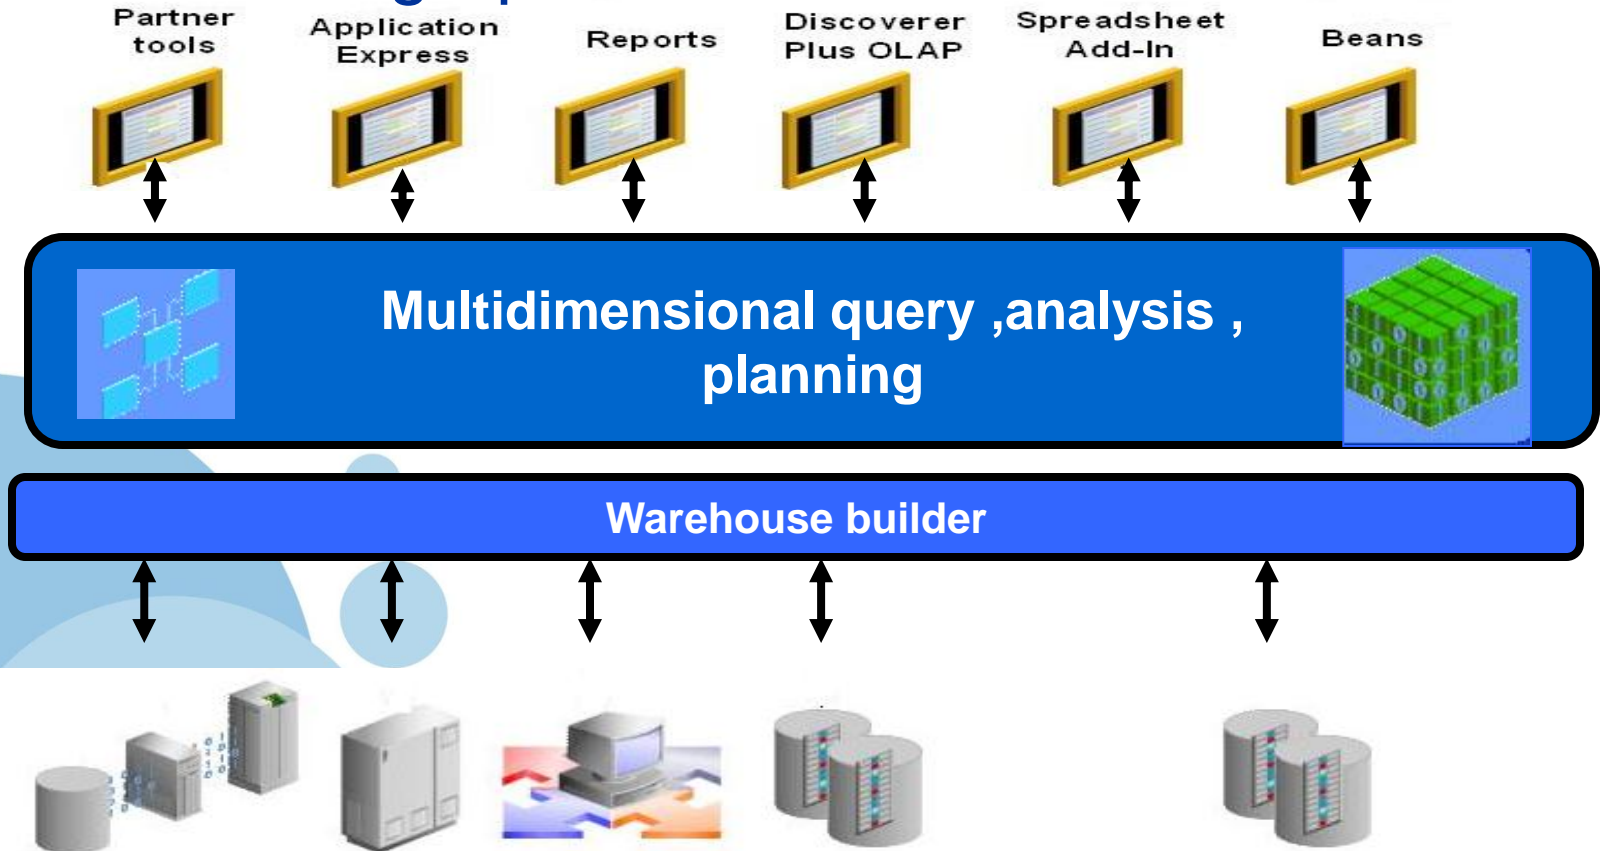

➤ Benefits are most obvious in companies with **several** Computer **platforms** and versions and with **many different** data sources.

➤ DW reduce time to locate **access** and **analyse** information.

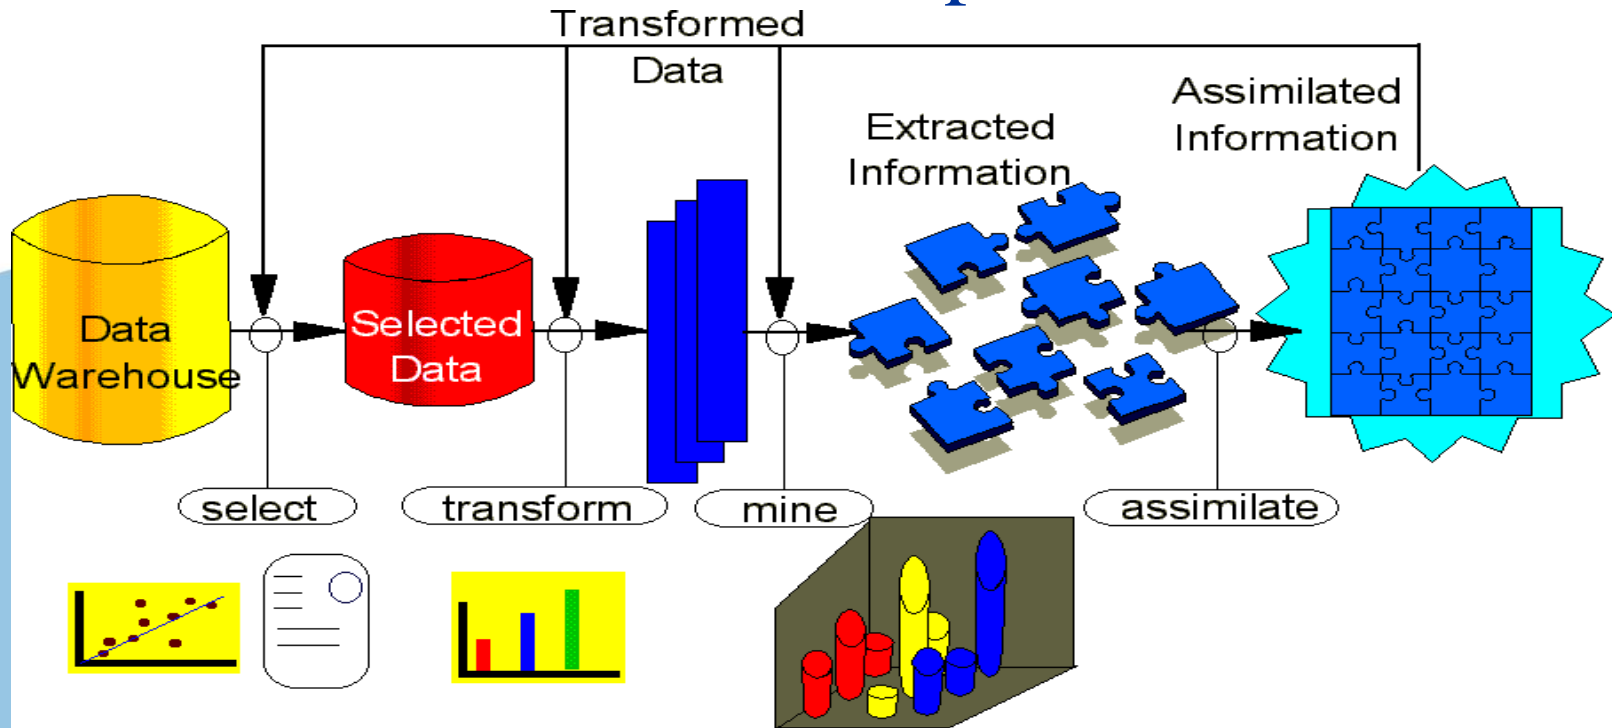

OLAP Architecture المعالجة التحليلية

OLP tools are a combination of analytical processing procedures and graphical user interfaces.

Data Mining التنقيب في البيانات

➤ **Data mining** is a process of discovering new correlations, **hidden patterns**, and trends from large volume of data stored in repositories.

Cloud Computing

- Cloud Computing may be defined as **common**, location-independent, online, utility that is available on demand.
- Thus, no matter where the client is **geographically** located, he can access the information in the cloud.
- The **on demand** feature means resources have to be dynamically allocated .

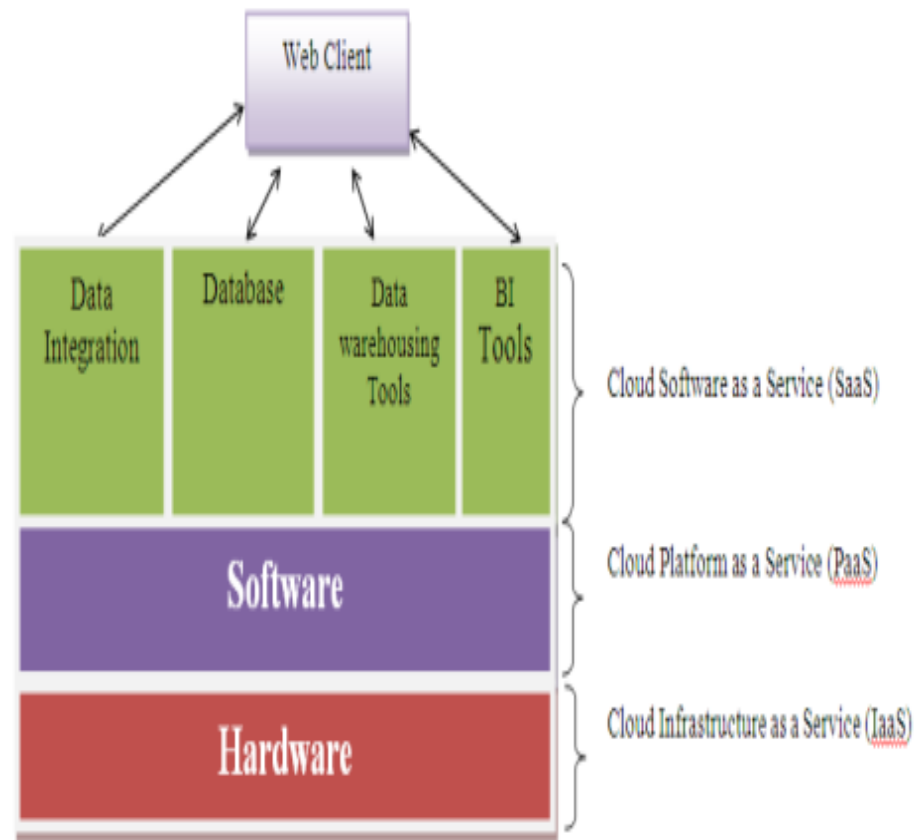

Why Cloud Computing

- *Flexibility*
- *Disaster recovery*
- *Automatic software updates*
- *Capital-expenditure Free*
- *Increased collaboration*
- *Work from anywhere*
- *Document control*
- *Security*
- *Environmentally friendly*

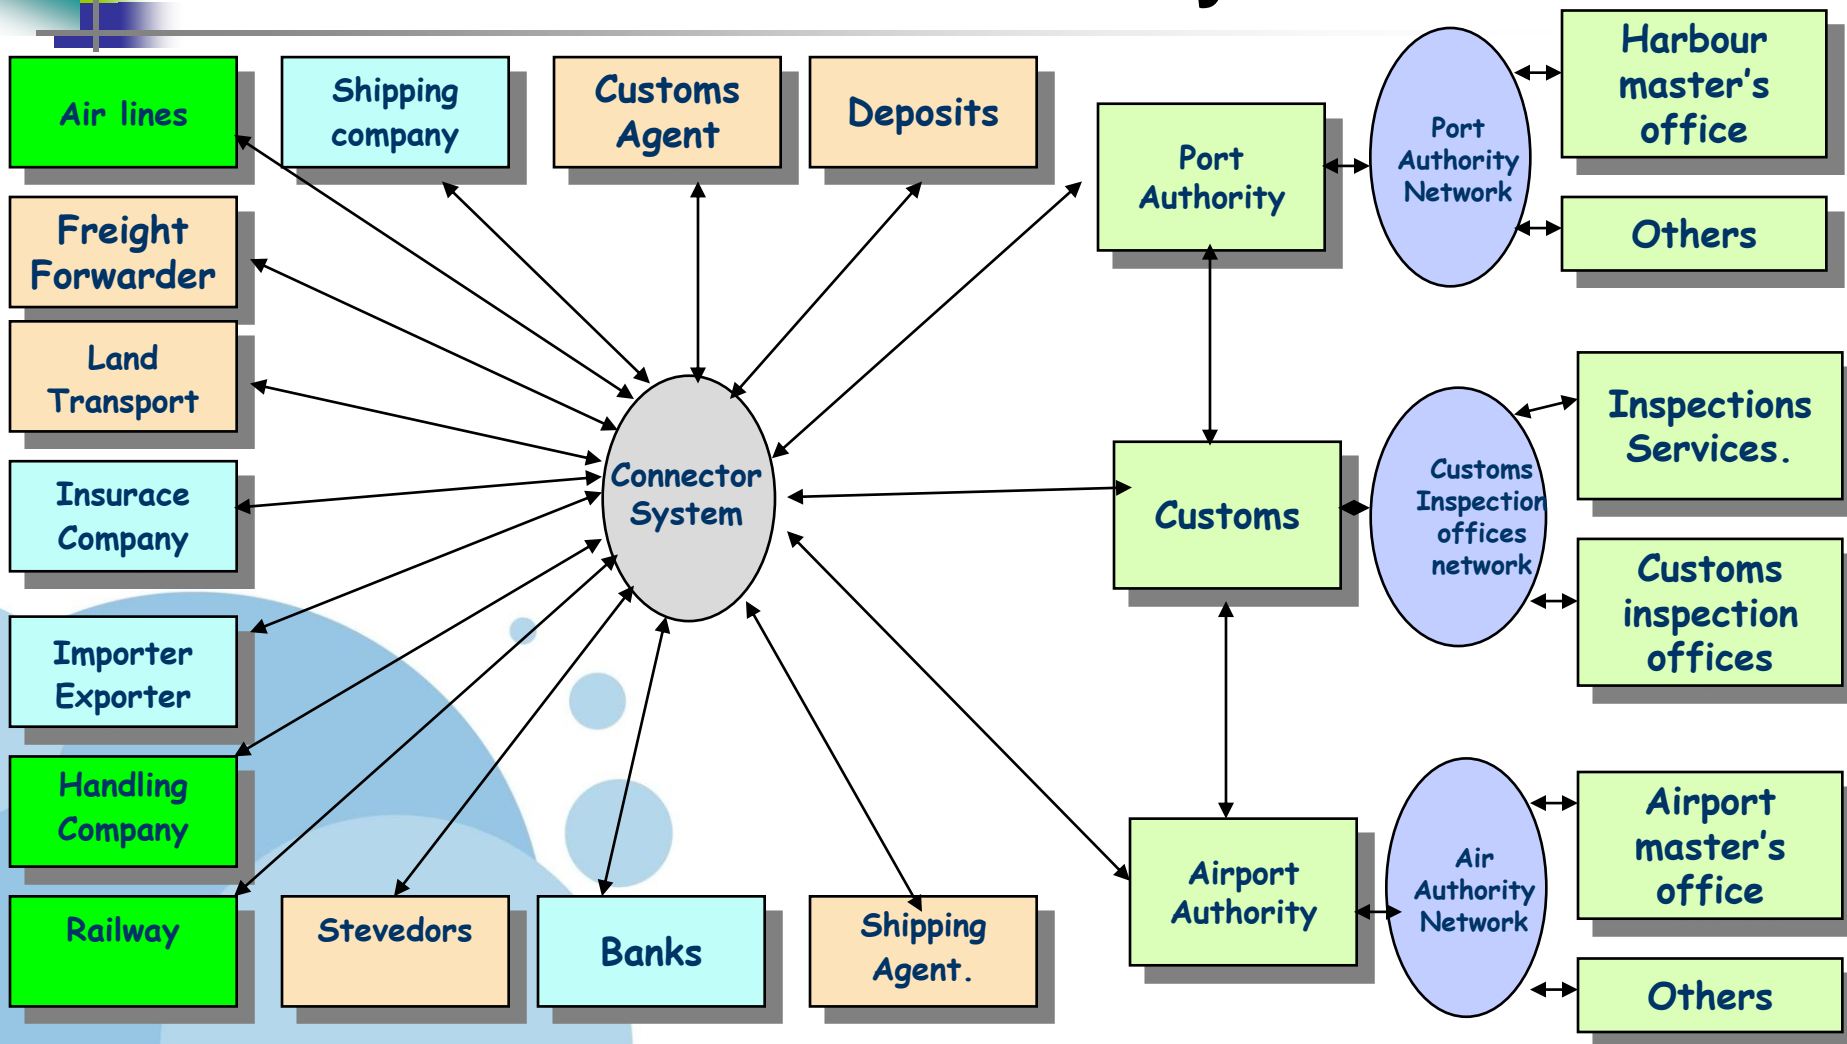

Cloud Business Intelligence

➤ **Cloud BI** is a **revolutionary** concept of delivering business intelligence capabilities as service using cloud based architecture that comes at a **lower cost**, **faster** deployment & **flexibility**.

Maritime Sector Community

Smart Port

➤ **Smart Port** : To get the most out , the following components must be included:

- Port Community Single Window System **نظام النافذة الواحدة الإلكتروني**
- Port E-Marketing System **نظام تسويق الإلكتروني بالميناء**
- E-Commerce Systems **نظم الشراء فى ظل التجارة الإلكترونية**
- Process Control E-Surveillance **التحكم عن طريق الرقابة الالكترونية**
- Archiving System **نظام حفظ وإدارة الوثائق**

Single Window System

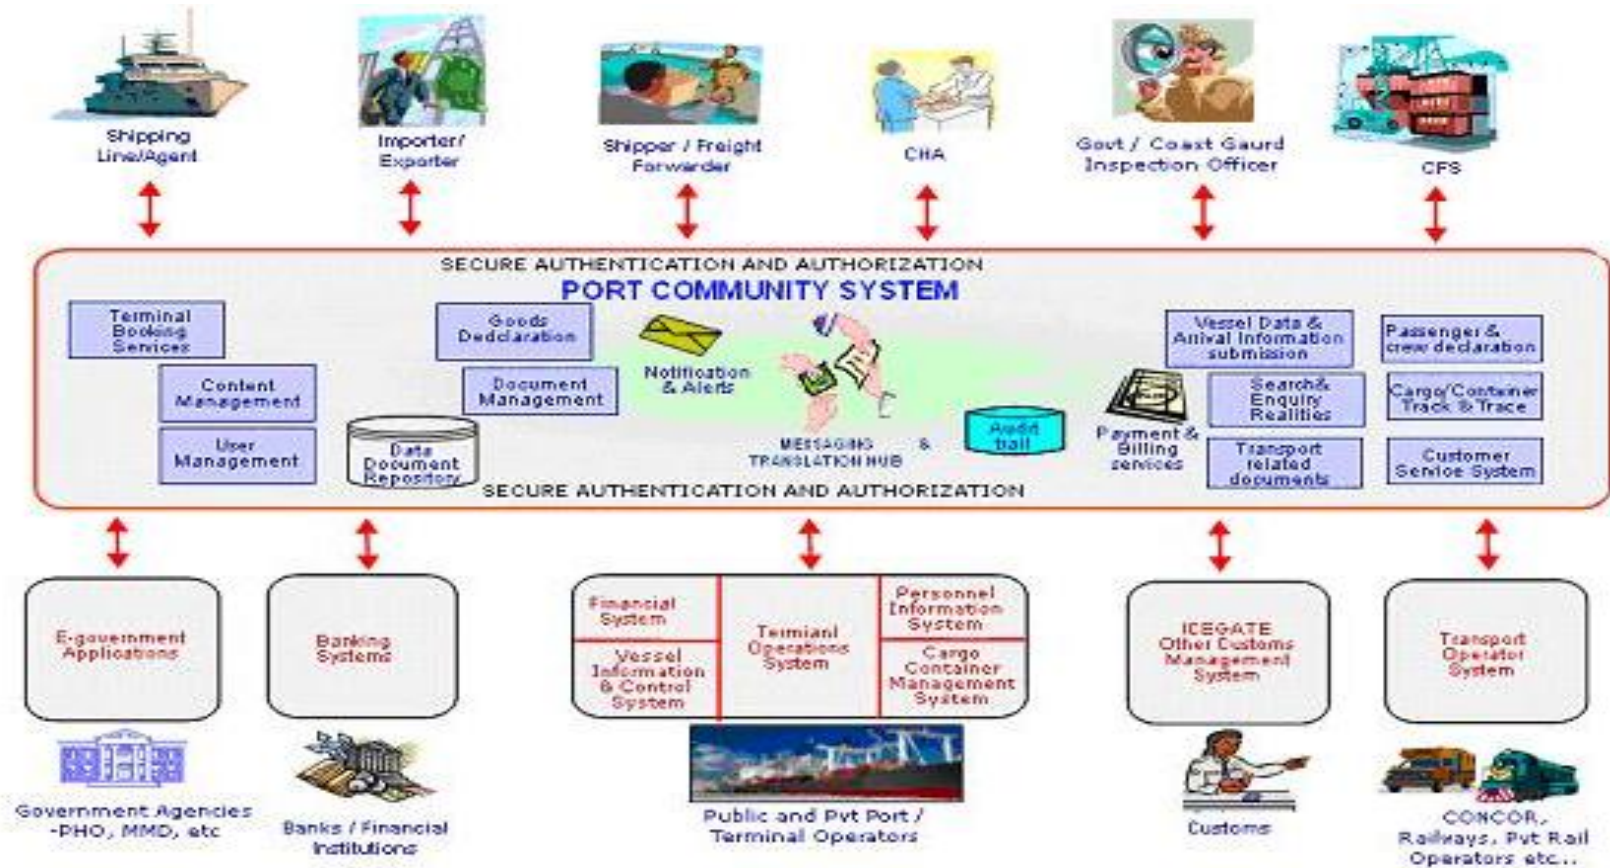

➤ Port Community Single Window System

نظام النافذة الواحدة الإلكتروني

E-Marketing System

➤ Port Electronic Marketing System نظام تسويق الإلكتروني بالميناء

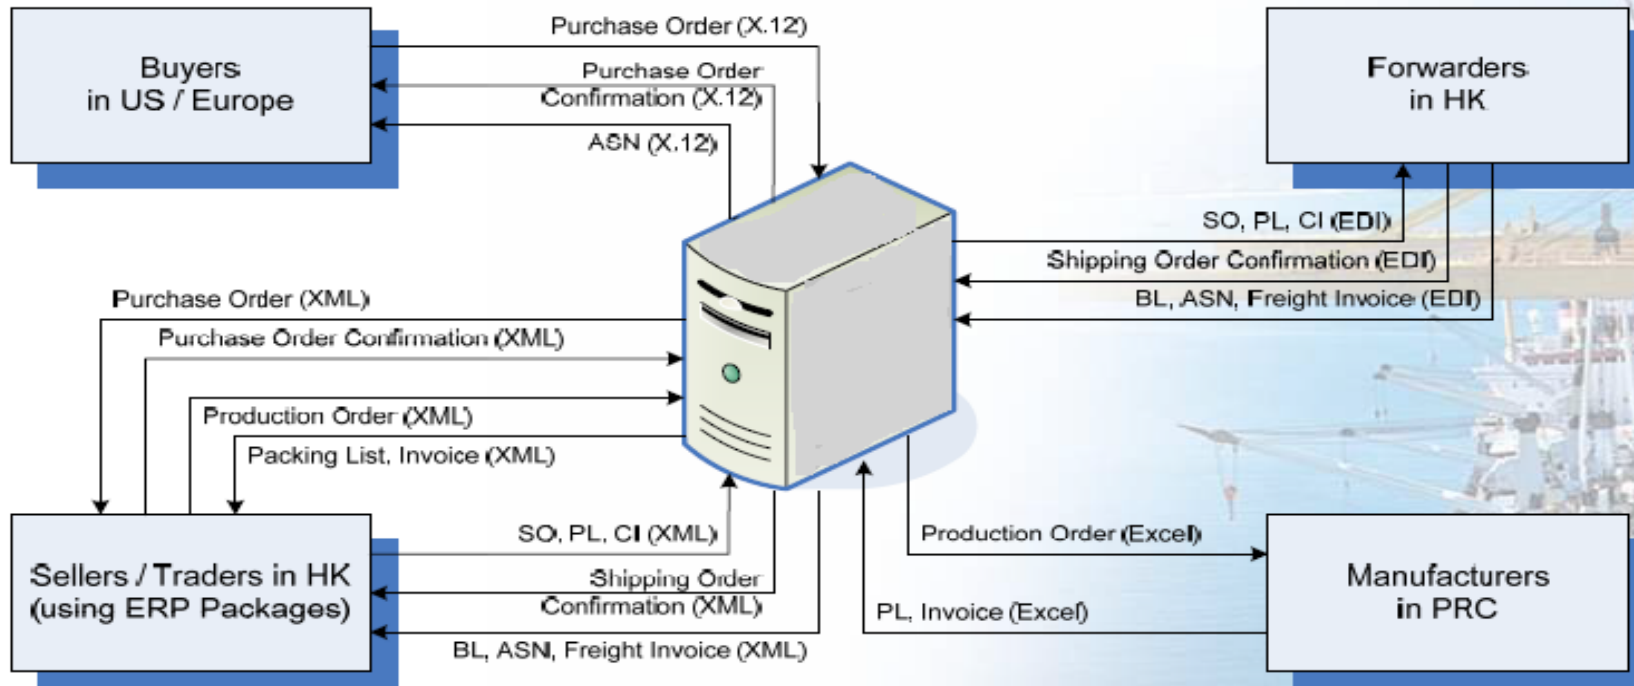

E-Commerce System

➤ E-Commerce Systems

نظم الشراء في ظل التجارة الإلكترونية

Documents Flow in a Procurement Process

E-Surveillance

➤ Process Control E-Surveillance

التحكم في العمليات عن طريق الرقابة الالكترونية

Archiving System

➤ Archiving System

نظام حفظ وإدارة الوثائق

E-Logistics Services

➤ E-logistics

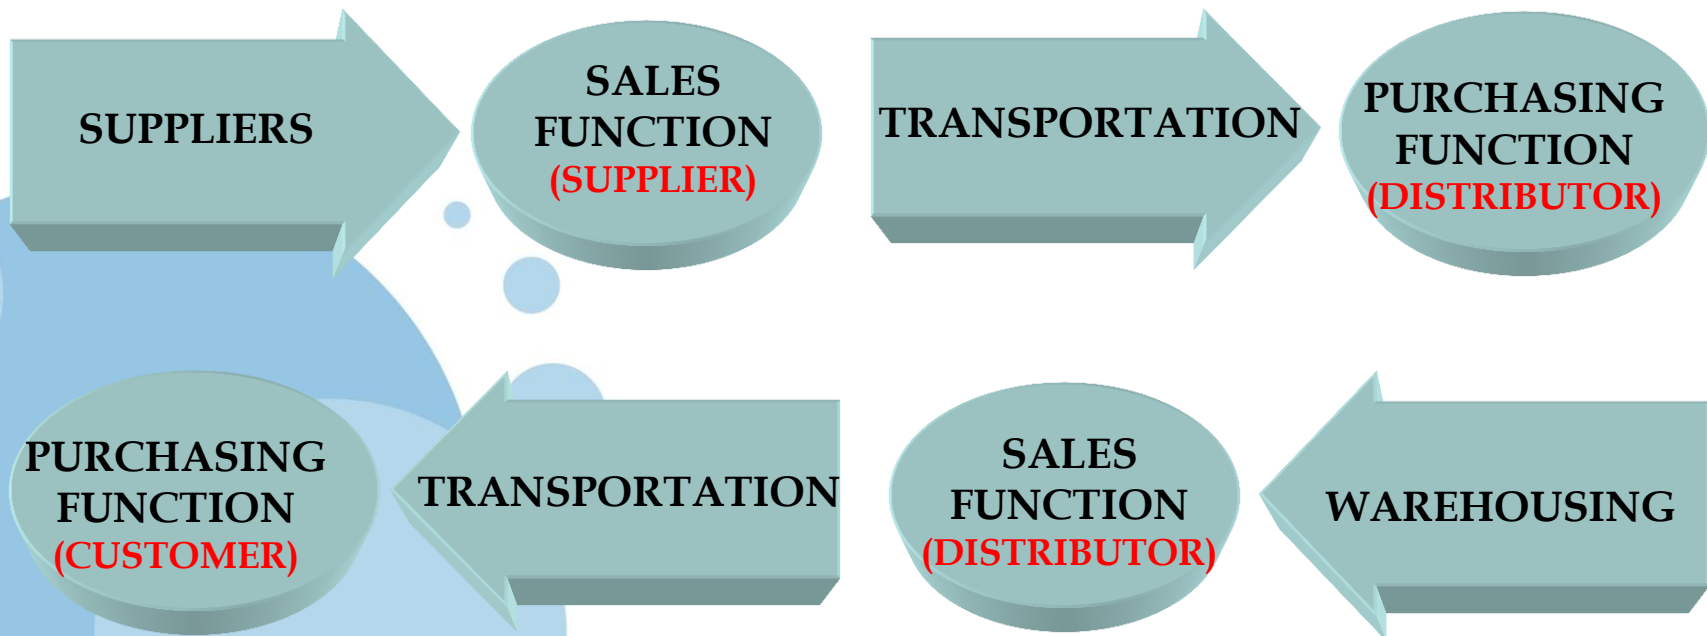

Services is a set of computer programs are used to provide **services** to customers & business partners.

What is Logistics

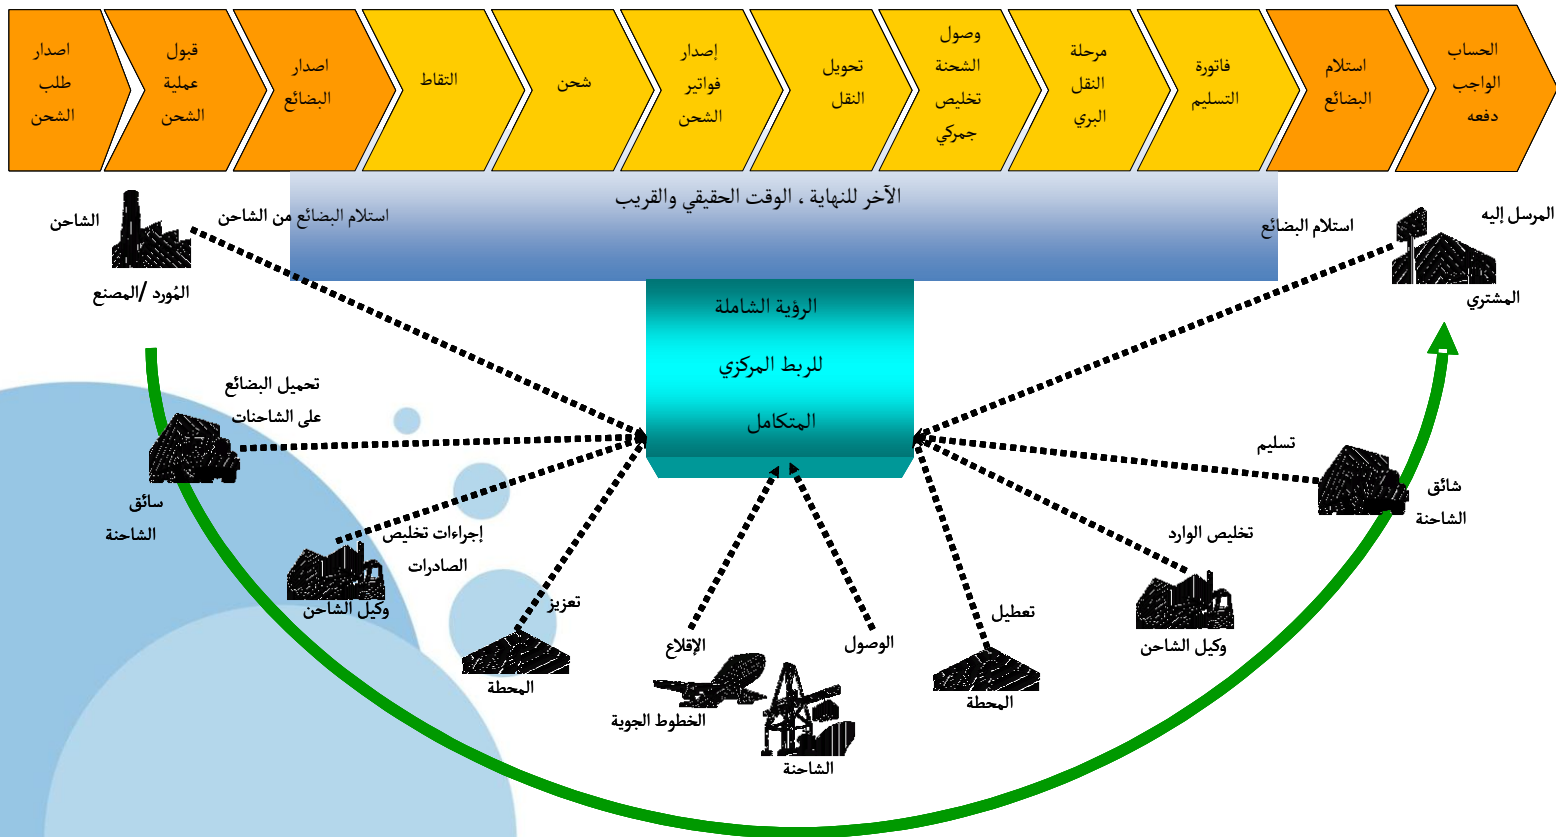

- **Logistics** is defined as the process of **movement of materials and products** into, through and out of a firm.

The Logistics Flow Chart

E-Logistics Services

E-logistics Services Global Vision

CBI Technology And Key Business Factors

- Key business factors (**KBF**) are measures or indicators that are significantly related to the business success of a particular industry.
- **KBF** contribute to the overall improvement of results and as such have to be closely and continuously monitored.
- Defining **KBF** requires specific **knowledge** and **understanding** of maritime sector's core business and services, behaviour and habits of its clients, the ways its services are being used.

CBI Technology And Key Business Factors

- Implementation of **KBF** monitoring requires **CBI** tools.
- CBI help users **identify risk** early and any material **changes** in business condition.
- CBI technology can collect and show data about each client, and service, and provide an aggregate **panoramic view** of business performance.

Business Intelligence Role

➤ Logistics service providers and Smart Port require:

- *Stringent and **standardized** process management.*
- *Fine-tune and Better overview of all **logistics processes** .*
- *Fast **evaluation** of data for a real time overview.*
- *Optimize and run the **transportation chain** more efficiently.*
- *Accomplish the **tracking of packages** in real-time.*
- *Keep an ongoing record of the **status** of your parcels and deliveries.*
- *Provide your customers with on-time, reliable and efficient services.*

Impact of Cloud Business Intelligence

➤ Smart Port use **CBI** to:

- *Track the status of deliveries and goods in real-time.*
- *Adjust services accordingly*
- *Monitor the capacity utilization of your service fleet.*
- *Streamline the on-the-ground management of your vehicles.*
- *Facilitate maintenance-repair-overhaul (MRO) .*

➤ Logistics services providers use **CBI** to:

- *Manage the supply chain through **real-time** analysis.*
- *Fully utilize **warehouse** capacity.*
- *Keep stock size **workable**.*
- *Enjoy **seamless** tracking of deliveries.*
- *Streamline the order-monitoring process.*

Conclusion

- The term **Cloud Business Intelligence** refers to the process for increasing the competitive advantage of a business by **intelligent** use of available data in decision making.
- CBI support of the decision making process to augment **competitiveness**, making an efficient link between business strategies and IT systems.
- CBI achieves **complex** analysis of big data in no time providing a **comprehensive** review of business-critical performance to help maximize **performance** of company-critical processes.

Conclusion

To prosper in Today's Complex Business Environments
To Face Business Environment Challenges

1

- Operational details
Information is
required.
- Record & Store
Operations and
processes

2

- Create Data
warehouses.
- Manage Data with
Intelligent
Techniques.

3

- Implement CBI
Technology
In All Operations
Level In The Future

Thank You
