

**Impacts of the Fourth Industrial Revolution on Port-City Integration
“World Port Sustainability Program Aspects”**

Name: dr. Siegfried Segers

Job Title: Product Owner Containers/ Community Builder - NxtPort

Short Bio (no more than 300 words)

Like all physicists, Siegfried Segers knows that every process in nature has a waste component and not much can be done to prevent this (thank you second law of thermodynamics!).

In logistic processes, there is also a (large) waste component but luckily for us, this waste can be reduced.

Siegfried's main objective is to decrease this component by using the power of NxtPort, the Antwerp based data sharing platform, where he works as Product Owner.

Together with his team he can help you to Unleash the Power of Together!
